## About This Game

### Rogue Singularity

Rogue Singularity is a high-speed infinite obstacle course inspired by the classic 3D platformers of the 1990s.

A wandering black hole – a rogue singularity, in fact – has crashed into your star system, turning countless worlds into floating debris. You control a plucky little robot, traversing the remnants of these worlds while dodging hazards, escaping hostile creatures, and solving devious puzzles. Every level is procedurally generated, so you will never play the same game twice.

Customize your robot hero and prepare for a challenge, on Windows PC, Mac and Linux.

### More Information

*Rogue Singularity* takes players back to the golden age of third-person precision platformers, ideal for speedrunning.

Your first job is simply to survive. Each level is packed with hazards, and simply getting from one end to the other with your

robot in one piece will be a challenge. As your skills grow, you will be challenged not only to survive, but to reach the end of the level in the fastest possible time. Tackle a level that has been shared through the online community, and you will even be able to race against the ghost of the fastest player.

No level will be the same twice. Each location in *Rogue Singularity* is procedurally generated for infinite replayability, but any level you successfully complete is shared with the rest of the community. Master the level, share it, and you'll set the pace for others to strive for as they jostle for the #1 spot on the leaderboard.

There are also weekly challenges which allow you only one chance to make it to the end safely and get your time on the leaderboard. Will you be the fastest survivor?

## Features

- **Precision platforming!** Surviving this 3D world requires reflexes and precision.
- **An infinite galaxy!** Every level of every playthrough is a unique procedurally-made experience.

I've been following this project since 2015 and found that it's vastly evolved since.

- The procedural generation of the floating gauntlet; feels fresh and varied each time.
- There's a sense of constant progression. With tokens going towards cosmetics, useable equipment, world shortcuts and unlockable abilities. I found that the glide propeller worked wonders for not falling into the void!
- Excellent array of sfx, music.
- The examiner is fully voice acted. The dialogue further extending the comedy and overarching goals of the game.
- Controls are tight reminds me of Super Mario 64.
- The environments and lighting effects have become even more polished since the trailer.. The best parts of 3D platforming mixed with smart level generation helps this game keep fresh for a long time.. I love the graphics and the music, what little I've heard of the voice acting is also great, and the gameplay is also fun. I don't like that once I lose all my lives I need to restart from the beginning each time I play. Because I'm unlikely to ever make it through the entire game, that just makes me more likely to look for something else to play once I'm dead rather than redoing the same levels again and again and again and ...

Also, I recommend playing with an xbox controller. Playing on a keyboard and mouse was tough.
